

Background Universe

MA Lei

January 23, 2012

The background universe is rather simple if we adopt the idea that the fundamental cosmology principle is flawless.

The background of the universe can be identified with the following quantities, i.e.,

- a , which is the scale factor. The scale factor is the scale of the metric.
- t , which is the age of the universe. If someone asks, this is the age of the universe for free falling observers.
